Set Your Computer for WPA2 (Windows XP)

Select a network

1. Click the "Start" menu, and select the "Control Panel."

2. Double click "Network Connections."
3. Click "Wireless Network Connection," and then click "Change settings of this connection" (under "Network Tasks").

4. Click the "Wireless Networks" tab.
5. If "Pace_Secure" displays in the "Preferred Networks" window, select it and then select "Properties."
Note: If "Pace_Secure" does not display in the "Preferred Networks" window, click the "Add..." button, and enter "Pace_Secure" in the "Network Name (SSID)" field.

**Enter network settings**

1. Select "WPA2" on the "Network Authentication" drop-down menu.
2. Select "AES" on the "Data encryption" drop-down menu.

3. Click the "Authentication" tab.

4. Select "Protected EAP (PEAP)" on the "EAP type" drop-down menu.

5. Ensure that the "Authenticate as computer when computer information is available" box is not checked.
6. Click the "Properties" button.

7. Ensure that "Connect to these servers:" is not checked (as this is checked by default).

8. Check all Entrust.net Certificates.

9. Ensure that the "Select Authentication Method" drop-down menu is set to "Secure Password (EAP-MSCHAP v2)."
10. Click the "configure" button.

11. Uncheck the box that says "Automatically use my Windows logon name and password (and domain if any)." Click the "OK" button.
12. Click "OK" in the "Protected EAP Properties" window.

13. Click "OK" in the "Wireless Network Properties" window.

14. Click "OK" in the "Wireless Network Connection" window.

**Log in**

1. The first time you attempt to connect to the "Pace_Secure" network, an icon displays in the bottom right corner of your screen, prompting you to "select a certificate or other credentials for connection to the network Pace_Secure."

   Click the icon.
